Seat selection count selection by using increment and decrement button, then seats will be allocated automatically.</p> <p>12. Seat selection will be a manual method (manual selection).</p>				

**Question : Book a Ticket in online [Online Bus Reservation System]**

4.What are the languages the client needed in this project?

**Ans :** Indian languages and English( UK )

5.Is this application going to be open-source or closed-source?

**Ans :** Open-Source

13. Show the Travel history in the Main Page.

14. Don't Show the Travel history in the Main Page.

**WHY ?**

01. In the admin panel, add, delete, or update the bus details after the document verification, and your bus will be added to the app and a unique identifier will be generated.

02. In fare select the source and destination route with add,delete or update option.

03. After booking, provide the driver and cleaner details to the customer.

04. Registration done with a help of google account.

05. Seat selection will be a manual method (manual selection).

06. Show the Travel history in the Main Page.

**WHY NOT?**

01. In the admin panel, adding or updating some details without verification may lead to a technical problem.

02. In fare selection, manual entry may take more time and make more mistakes.

03. By using a Google account, we can access it easily. In case a user forgets their account password, they can access it easily by using a recovery OTP or recovery mail ID, which is more secure.

04. Manual seat allocation is the user's almost choice; some users want window seats, and some users don't like window seats, so manual seat selection is suitable for this project.

05. Travel history: to track the present places, I want to see their previous travel details.

**ADMIN :**

**Algorithm :**

**Step 01:** Start

**Step 02:** Create an admin panel.

**Step 03:** Verify the bus documents

**Step 04:** Add the bus details, Delete the bus details, Update the bus details and View the details by using an individual bus id.

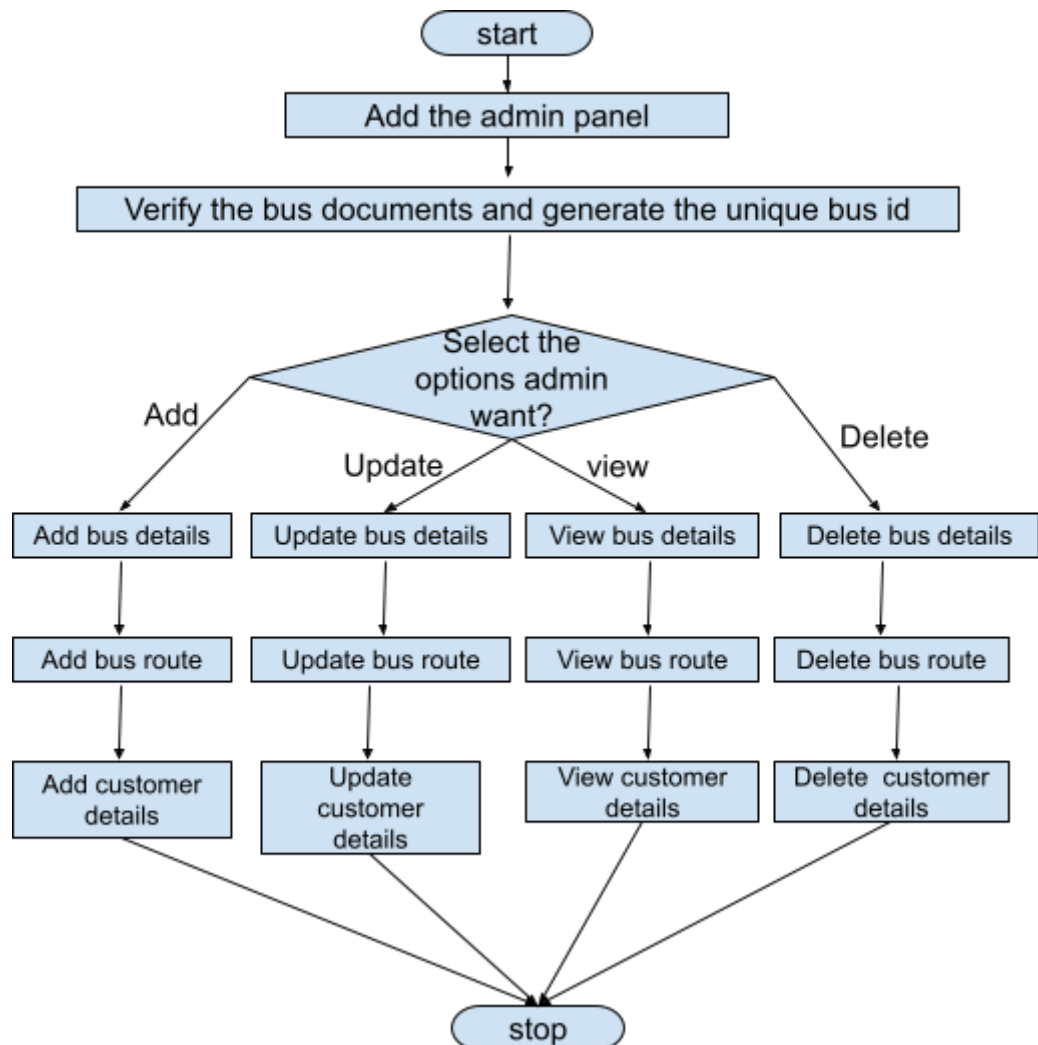

**Step 05:** Add the bus route, Update the bus route, Delete the bus route after adding bus details.

**Step 06:** Admin can Add the customer details, Update the customer details, Delete the customer details.

**Step 07:** Add the driver and cleaner details, Update the driver and cleaner details, Delete the driver and cleaner details.

**Step 08:** stop

**Flowchart :**

**USER :**

**Algorithm :**

**Step 01 :** start

**Step 02 :** A new user must register his details in the registration form.

**Step 03 :** After registration login to the application by using user id and password.

**Step 04 :** If the user id or password is incorrect then repeat this **step 03** again.

**Step 05 :** User id or password is valid goto the next step.

**Step 06 :** Select the source and destination route.

**Step 07 :** Show the Available seats.

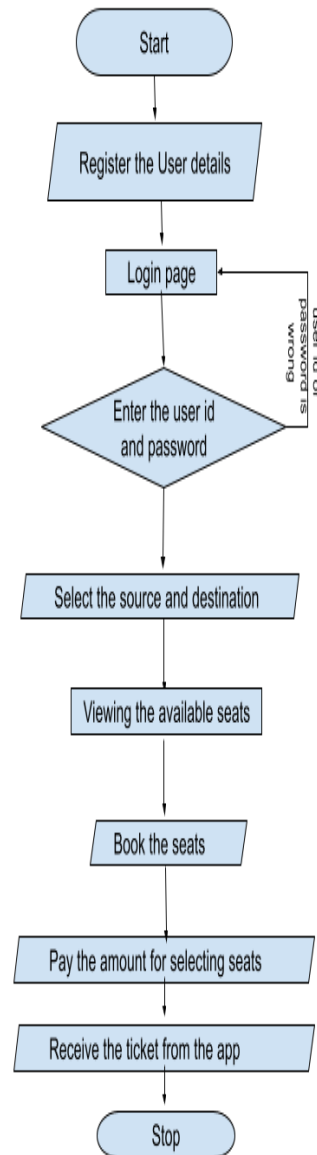

**Step 08 :** Book the seats.

**Step 08 :** Pay the amount for booking.

**Step 09 :** Get the ticket from the application.

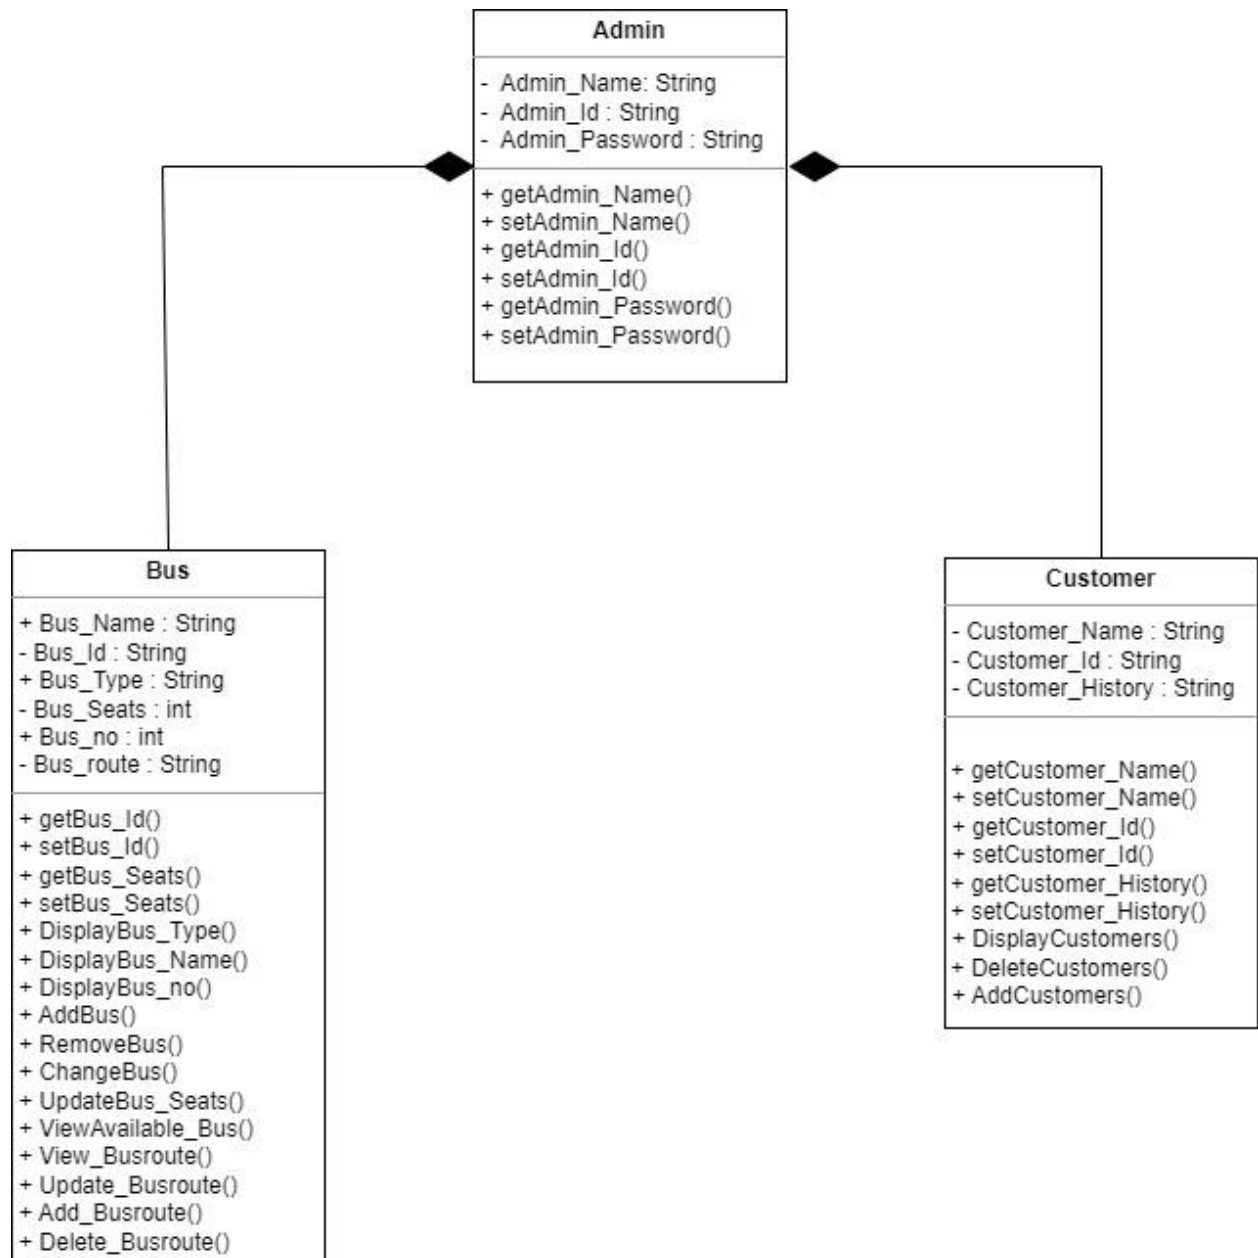

**Step 10 :** stop
